

# Atlas-Stord Fish Meal Plants & Equipment

[www.atlas-stord.com](http://www.atlas-stord.com)

## Turning raw material into high-quality products

Atlas-Stord Denmark A/S is specialized in fish meal technology, mastering plant and equipment design. Although the fish meal process is based on the same principles, the process requirements vary not only from one area to another, but also from one plant to another. Freshness of the catch, type of fish, requirements for meal and oil quality and environmental issues vary between plants and even at the individual fish meal plant. Atlas-Stord Denmark A/S has a full delivery programme to meet such challenges.

Experience gained during our many years in the fish meal business is constantly being

put into use in the design of modern plants and equipment. We have in-house engineering and manufacturing facilities and have close co-ordination with sub-suppliers and selected local manufacturers.

Besides a wide range of cookers, presses, pumps and evaporators we also offer a unique programme of driers in the market which allow maximum efficiency, safe production and compliance with local environmental standards.

Fish meal plants from Atlas-Stord Denmark A/S operate all over the world. The delivery programme ranges from small land-based or ship-based units up to the largest fish meal plants in the world.
